†: Text-based methods    ‡: Image-based methods    ‡: Multi-modal methods

- (4) textual information (SAFE\I) is more important compared to visual information (SAFE\T)

# Experiments

## Parameter Analysis

- $\alpha$  and  $\beta$  are used to allocate the relative importance between
  - multi-modal features ( $\alpha$ )
  - similarity across modalities ( $\beta$ )
- Acc: 0.75~0.85
- F1: 0.8~0.9
