Introduction

Fake News Detection

- During critical events such as a political election or a pandemic outbreak, disinformation with malicious intent, commonly known as “fake news”.
- As part of the fight against COVID-19, the WHO also addressed the infodemic caused by fatal disinformation related to infections and cures.
- Many sites and social media have devoted efforts to identify disinformation.
 - Facebook encourages users to report non-credible posts and employs professional fact-checkers to expose questionable news.
 - Manual fact-checking is also used by fact-checking websites such as Snopes, FactCheck, PolitiFact and Full Fact.
