Extractor

• Event adaption stage is to adapt the model parameters for specific event with the help of the support set.

Detection

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set.

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set.

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set.

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set.

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set.

The support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adaption stage is to adapt the model parameters for specific event with the help of the support set adapt the su
