Related Work
Discovering the distinctive emotional signals

- The approaches as mentioned beginning, some works only leverage the emotion signals of fake news contents but ignore the emotions of fake news comments and the relationship between the two emotions.

- Recently, has propose an adaptive fusion network for fake news detection, modeling emotion embeddings from the contents and the comments.

  - This work focuses on adaptively fusing various features by advanced deep learning models.

  - Do not explore the specific distinction of dual emotion signals between fake and real news.

Methodology

Overall framework of using Dual Emotion Features for fake news detection
